PROJECTS :

QR code generator | *HTML, CSS, JS*

Dec'23

- A browser based application to convert any link or text into a scannable and computer readable QR code.
- I used a precompiled JS script to convert the text right into the browser without any external API or website.

Watch-Timer | *HTML, CSS, JS*

june'24

- A browser-based application that allows users to start, stop, and reset a watch timer in real-time
- The application is built using precompiled JavaScript, ensuring smooth performance without the need for external dependencies or APIs.

Sudoku Solver | Java

Aug'23

- Implemented backtracking algorithm to solve sudoku using Java and its gui and concurrency libraries.
- Sudoku of any difficulty level can be solved by this programme within minutes.

Certifications :
